## EMPLOYMENT EXPERIENCE

- 2018.1–2018.3 **Netease Beijing R&D Center Youdao NLP Group**, A Rule-Based MT Model for Classical Chinese - Modern Chinese Translation  
Built a dictionary of regular words in classical Chinese and developed a segmentation method based on RMM.  
Built a phrase-based model for translation and got a BLEU score of 0.91 (unigram), 0.84 (bigram) and 0.71 (trigram).
- 2017.6 – 2017.8 **LOHAS Tech (A startup company) Machine Learning Group**, Wave Form Recognition Model in Electrocardiogram (ECG) Signal  
Implemented ECG recognition model proposed by Andrew Ng to detect P,Q,R,S,T wave in ECG signal. Model was trained on MIT-BIH dataset and tested on ECG data from real patient and got an average accuracy of 99.3%.

Designed a 5-dimensional feature vector and deployed agglomerative clustering method to merge similar clusters to recognise 4 kinds of noise (MA, WB, MI, ACI). The proposed method achieved Sn: 88.05%, Sp: 92.46%, Ac: 91.22% on real ECG dataset.

2016.9–2017.5 **Institute of Software, Chinese Academy of Sciences HCI Lab**, Evaluation of neurological function in mobile environment based on MRI

Explored the feasibility and accuracy of detecting motor impairment in early PD via sensing and analyzing users' common touch gestural interactions on smartphones.

Investigated four types of common gestures, including flick, drag, pinch, and handwriting gestures, and propose a set of features to capture PD motor signs.
